

## TEAM WORK IS HOW TO ACHIEVE

During the month of December 2006 the Elizabeth Tooling Management Team were made aware of 3 A-Class tools that had significant wear to the ejector system. The problem was brought to attention immediately and the tooling team and external toolmakers took initial action. Meetings and consultation throughout the Elizabeth Site and other external Iplex Staff were

conducted.

The Elizabeth tooling and management Team are extremely impressed with the response from the external toolmaker, Diemould Tooling Services. Diemould worked tirelessly to meet deadlines on an already hectic schedule due to their maintenance plans and other commitments. Diemould efforts showed great willingness to provide Iplex with operational tooling

in a timely manner.

The relationship built between both Iplex and Diemould over the past two years is now beginning to reap its benefits and restores confidence in the ability to service tooling in the manner it deserves.
